

Professional Security Services

Cyber Security Solutions

Fortify your organization's defences against the complex and dynamic nature of cyber threats through a combination of cutting-edge technologies and expert services customized to fit your unique landscape.

Cyber Security Solutions

Data Security

Protecting data is essential, and our solutions address this with a comprehensive approach. We cover fundamental needs like disk encryption on endpoints and secure VPN protocols, as well as advanced requirements like data leakage prevention (DLP), data labelling, Digital Rights Management (DRM), and email encryption. Our services include real-time monitoring for data breaches and robust backup and recovery solutions to ensure complete data security.

Network Security

Our network security solutions begin with traditional perimeter defences like Unified Threat Management (UTM), VPN, secure remote access services (SRAS), DDoS protection, secure SD-WAN, and secure wireless networks. We also offer advanced solutions such as Network Access Control (NAC), granular network segmentation, and Secure Access Service Edge (SASE) including Zero Trust Network Access (ZTNA). Our services include advanced network event and incident analysis as part of our 24x7x365 SOC services.

Application Security

We provide thought leadership on secure-by-design principles and offer services such as source code analysis and penetration testing. Our solutions include reverse proxies, web application firewalls (WAF), and application control on endpoints. We also address Shadow IT concerns with CASB and related solutions, ensuring comprehensive application security.

Cloud Security

Our cloud security leverages native capabilities of cloud vendors, enhanced with solutions like CASB and SASE/SSE. Our managed security services and SOC services are cloud-enabled; and include enterprise Security Information and Event Management (SIEM) and Security Orchestration, Automation, and Response (SOAR) options. These are further enhanced by threat intelligence and AI offerings for proactive mitigation and automation.

Identity Security

Our comprehensive identity security solutions protect user identities and manage access to resources. We cover essential offerings such as Identity and Access Management (IAM) and Multi-Factor Authentication (MFA), and advanced solutions like Privileged Access Management (PAM), multi-cloud identity services, and identity governance, risk, and assurance. Additionally, we incorporate evolving concepts and technologies, such as Zero Trust, to meet specific customer needs like the least privilege principle. With our robust identity security solutions, we ensure your organisation's resources are secure and access is effectively managed.

Endpoint Security

Our endpoint security solutions protect servers and mobile devices starting with basic defences against known malware and web and email threats. We also offer advanced protection including Endpoint Detection and Response (EDR), 24x7x365 Managed Detection and Response (MDR) from our SOC, zero-day and sandbox malware protection, and vulnerability management. Our Secure Service Edge (SSE) endpoint agents enable secure remote work. We also provide device and application management to counter Shadow IT and unmanaged devices.

Infrastructure and Operations Security

Our infrastructure and operations security solutions include vulnerability management, configuration management, and patch management offerings, along with critical infrastructure support like directory services for identity and access management, and device management. We offer SIEM and SOAR solutions, AI-enhanced tools, breach and attack simulation (BAS), and more. These are typically provided as part of our managed security services and SOC services.

Professional Security Services

Cyber Security Solutions

Professional Security Services

Deployment Services

Our cybersecurity deployment services offer clients the expertise and support needed to safeguard their organisations against sophisticated cyber threats. We deliver a wide array of services, encompassing assessment and planning, solution design and architecture, implementation and integration, customisation and optimisation, testing, as well as training and knowledge transfer. Our goal is to ensure robust protection for our clients' organisations and minimize the risk of security breaches.

Security Support Services (SSS)

Our Security support services are provided to those customers that need assistance because of skill, experience or capacity constraints. Our certified engineers can be called upon via Liquid's 24x7x365 Service Desk or by logging a support ticket to perform diagnostics, troubleshooting, corrective actions, upgrades and more.
