External Penetration Testing

Identify External Weaknesses Before Attackers Do

Internet-facing assets are the most exposed part of your infrastructure — and the first target for threat actors. Liquid C2's External Penetration Testing helps organisations proactively uncover exploitable vulnerabilities, misconfigurations, and weaknesses accessible from the outside.

This service validates the effectiveness of perimeter defences and supports compliance with cybersecurity standards by assessing external-facing IPs, public-facing services, and internet-accessible infrastructure

External Penetration Testing Packages		
Silver Package	**Gold Package**	**Platinum Package**
Best for: Organisations looking for foundational visibility into their external W.	**Best for:** Organisations with internet-facing web applications looking for moderate assessment on both network and application-level risks.	**Best for:** Security-forward organisations seeking an advanced assessment of external technical and human attack surfaces.
Includes:	**Includes:**	**Includes:**
☑ Automated Vulnerability Scanning on public IPs (e.g., Nessus, Nmap) ☑ Manual Validation to Eliminate False Positives ☑ Exposure Mapping of Public Services and Endpoints ☑ Banner Grabbing and Version Identification ☑ Detection of Basic Misconfigurations (e.g., Open Ports, Weak SSL/TLS)	☑ All features of the Silver Package ☑ Black Box Web Application Testing (no code access) ☑ OWASP Top 10 Coverage (e.g., Injection, XSS, Misconfigurations)	☑ All features of the Gold Package ☑ Phishing Simulation Tailored to Your Organisation ☑ Targeted Campaigns for Selected Employee Groups ☑ Awareness Metrics: Open Rates, Clicks, Submissions
Deliverables: Executive Summary + Technical Report with Vulnerabilities Risk Rating	**Deliverables:** Executive Summary + Technical Report with Vulnerabilities Risk Rating	**Deliverables:** Executive Summary + Technical Report with Vulnerabilities Risk Rating + Phishing Simulation Report

Why Choose Us?

Certified Security Experts (OSWE, OSCE, OSCP, OSWP, GPEN, GWAPT, CEH, CISSP, among others)
Industry-Recognised Testing Methodologies (OWASP, MITRE ATT&CK)
Customisable Testing Approach Based on Your Business Risks
Detailed Remediation Guidance to Strengthen Your Security Posture

Get Started Today!
