Web Application Penetration Testing

Expose and Eliminate Application-Level Risks

Your applications are a gateway to critical data—and a top target for attackers. Liquid C2's Web Application Penetration Testing simulates real-world threats to uncover hidden flaws, from injection and authentication gaps to misconfigurations and logic weaknesses. Backed by OWASP methodology, our service validates the security of both internal and internet-facing applications, helping you stay compliant and reduce risk with confidence.

Web Application Penetration Testing Packages		
Silver Package	**Gold Package**	**Platinum Package**
Best for: Organisations requiring a surface-level test of their applications without exposing code or user roles.	**Best for:** Organisations looking for a balance between efficiency and coverage, with insights into some authenticated vulnerabilities.	**Best for:** Organisations requiring a deep-dive into application behaviour, user privilege boundaries, and sensitive business workflow validation.
Includes:	**Includes:**	**Includes:**
